

QuickCAM

Introduction

There are many proprietary camera systems that you can buy to see who is at the door before you open it. They're usually quite expensive but they are also stand alone. In this new IP world, proprietary hardware and software is fast disappearing and being replaced by generic device, as in this case, a telephone which supports job specific software.. Now you can see who is at the door by looking at your telephone handset. What a good idea!

How it works

Without getting too technical, the camera captures images and saves them into a folder where the application is installed. These images are time stamped and the QuickCAM application displays the latest image available, which it refreshes at chosen intervals. So, this is not a true video stream but is sufficient to see who is standing at the door. The quality of the image is determined solely by the quality of the camera.

Application Features

- Door panel integrates directly into you Alcatel Omni PCX Office/Enterprise.
- Displays camera images directly to the chosen handset.
- Compatible with all IP cameras providing the camera can store images.
- Provides the ability to associate cameras with one or more doors.
- The application will, if necessary, operate on a hunt group basis so that images are displayed on all phones within a group.
- Operates in conjunction with voice so that the receptionist can both see and verbally communicate with the visitor.
- Easy to use administration tool that also provides visual access to Cameras.
